雪櫃節能小智慧 Tips for refrigerator

1. Refrigerator should be placed away from heat sources such as a cooker, and make sure it is not in direct sunlight. It will operate more efficiently if it is in a cool spot.

雪櫃應盡量遠離熱源，如爐具，並確保安裝在不受陽光照射的位置。雪櫃在陰涼環境下會更有效地運作。

2. Keep the refrigerator at least 2.5cm of space on each side to allow good air circulation, and ensure there is adequate ventilation space at the back and top of the refrigerator.

保持雪櫃兩邊與其他物件至少距離2.5cm，以提供良好的空氣流通。並確保雪櫃的背面和頂部有足夠的空間通風。

3. Refrigerator should be kept at a steady temperature. Recommended temperatures are 2 – 4 °C for the fresh food compartment and -18 °C for a freezer.

雪櫃應保持在穩定溫度下操作。建議冷藏室溫度約在2 – 4 °C，冷凍室設定在-18 °C。

4. Do not put hot food straight into the refrigerator. As this will use up more energy when the fridge attempts to cool the food down. Save energy by letting it cool down first.

不要把熱的食物直接放入雪櫃。這會令雪櫃因需要冷卻熱的食物而增加能源消耗。建議先將食物涼放一會才放入雪櫃，以節省能源。

5. When you open the refrigerator door, the cool air escapes. The unit then works harder to replace the air. Therefore, minimize door openings as much as possible.

當每次打開雪櫃門，雪櫃內的冷空氣都會散失。然後雪櫃需要更多能源進行制冷。因此，請盡可能減少開門次數。

6. Cover liquids and containers with plastic wrap or a top so the fridge does not have to chill every exposed surface.

先將液體和容器用保鮮膜或頂蓋蓋好，再存放在雪櫃，以減少直接冷卻表面，浪費能源。

7. Make sure the refrigerator doors are properly shut and that the seals are clean.

確保雪櫃門正常關閉，密封封條保持乾淨。
