# Safety and warning information

## Before you switch ON the appliance

Please read the operating and installation instructions carefully! They contain important information on how to install, use and maintain the appliance.

The manufacturer is not liable if you fail to comply with the instructions and warnings. Retain all documents for subsequent use or for the next owner.

## Technical safety

This appliance contains a small quantity of environmentally-friendly but flammable R600a refrigerant. Ensure that the tubing of the refrigerant circuit is not damaged during transportation and installation. Leaking refrigerant may cause eye injuries or ignite.

If damage has occurred

- Keep naked flames and/or ignition sources away from the appliance,
- thoroughly ventilate the room for several minutes,
- switch off the appliance and pull out the mains plug,
- inform customer service.

The more refrigerant an appliance contains, the larger the room must be in which the appliance is situated. Leaking refrigerant can form a flammable gas-air mixture in rooms which are too small.

The room must be at least 1 m<sup>3</sup> per 8 g of refrigerant. The amount of refrigerant in your appliance is indicated on the rating plate inside the appliance.

If the power cord of this appliance is damaged, it must be replaced by the manufacturer, customer service or a similarly qualified person. Improper installations and repairs may put the user at considerable risk.

Repairs may be performed by the manufacturer, customer service or a similarly qualified person only.

Only original parts supplied by the manufacturer may be used. The manufacturer guarantees that only these parts satisfy the safety requirements.

A extension cable may be purchased from customer service only.

## Important information when using the appliance

- Never use electrical appliances inside the appliance (e.g. heater, electric ice maker, etc.). Explosion hazard!
- Never defrost or clean the appliance with a steam cleaner! The steam may penetrate electrical parts and cause a short-circuit. Risk of electric shock!
- Do not use pointed or sharp-edged implements to remove frost or layers of ice. You could damage the refrigerant tubes. Leaking refrigerant may cause eye injuries or ignite.
- Do not store products which contain flammable propellants (e.g. spray cans) or explosive substances in the appliance. Explosion hazard!
- Do not stand on or lean heavily against base of appliance, drawers or doors, etc
- For defrosting and cleaning, pull the mains plug out or switch off the fuse. Do not pull out the mains plug by tugging on the power cord.

- Store high-percentage alcohol tightly closed and standing up.
- Keep plastic parts and the door seal free of oil and grease. Otherwise, parts and door seal will become porous.
- Never cover or block the ventilation openings of the appliance!
- **Avoiding placing children and vulnerable people at risk:**

At risk are children, people who have limited physical, mental or sensory abilities, as well as people who have inadequate knowledge concerning safe operation of the appliance.

Ensure that children and vulnerable people have understood the hazards.

A person responsible for safety must supervise or instruct children and vulnerable people who are using the appliance.

Only children from 8 years and above may use the appliance.

Supervise children who are cleaning and maintaining the appliance.

Never allow children to play with the appliance.

## Children in the household

- Keep children away from packaging and its parts.  
Danger of suffocation from folding cartons and plastic film!
- Do not allow children to play with the appliance!
- If the appliance features a lock: keep the key out of the reach of children!

## General regulations

This appliance is designed exclusively for the storage of wine.

This appliance is intended for use in the home and the home environment.

The appliance is suppressed according to EU Directive 2004/108/EC.

The refrigeration circuit has been checked for leaks.

Please ask your dealer or inquire at your local authority about current means of disposal.

### Disposal of your old appliance

Old appliances are not worthless rubbish! Valuable raw materials can be reclaimed by recycling old appliances.

This appliance is labelled in accordance with European Directive 2012/19/EU concerning used electrical and electronic appliances (waste electrical and electronic equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU.

### Warning

Redundant appliances

1. Pull out the mains plug.
2. Cut off the power cord and discard with the mains plug.
3. Do not take out the trays and receptacles: children are therefore prevented from climbing in!
4. Do not allow children to play with the appliance once it has spent its useful life. Danger of suffocation!

Refrigerators contain refrigerant and gases in the insulation. Refrigerant and gases must be disposed of professionally. Ensure that tubing of the refrigerant circuit is not damaged prior to proper disposal.

# Room temperature, ventilation and cavity depth

## Ambient temperature

The appliance is designed for a specific climate class. Depending on the climate class, the appliance can be operated at the following temperatures.

The climate class can be found on the rating plate. Fig. **7**

Climate class	Permitted ambient temperature
SN	+10 °C to 32 °C
N	+16 °C to 32 °C
ST	+16 °C to 38 °C
T	+16 °C to 43 °C

### Note

The appliance is fully functional within the room temperature limits of the indicated climatic class. If an appliance of climatic class SN is operated at colder room temperatures, the appliance will not be damaged up to a temperature of +5 °C.

## Ventilation

The air on the rear panel of the appliance heats up. Conduction of the heated air must not be obstructed. Otherwise, the refrigeration unit must work harder. This increases power consumption. Therefore: Never cover or block the ventilation openings!

## Cavity depth

A cavity depth of 560 mm is recommended for the appliance. If the cavity depth is smaller – at least 550 mm – the energy consumption increases slightly.

## Installation location

Install the appliance in a dry, well ventilated room. The installation location should neither be exposed to direct sunlight nor near a heat source, e. g. a cooker, radiator, etc. If installation next to a heat source is unavoidable, use a suitable insulating plate or observe the following minimum distances to a heat source:

- 3 cm to electric or gas cookers.
- 30 cm to an oil or coal-fired cooker.

## Connecting the appliance

After installing the appliance, wait at least 1 hour until the appliance is switched on. During transportation the oil in the compressor may have flowed into the refrigeration system.

Before switching on the appliance for the first time, clean the interior of the appliance (see chapter “Cleaning the appliance”).

### Electrical connection

The socket must be near the appliance and also freely accessible following installation of the appliance.

The appliance complies with the protection class I. Connect the appliance to 220–240 V/50 Hz alternating current via a correctly installed socket with protective conductor. The socket must be fused with a 10 to 16 A fuse.

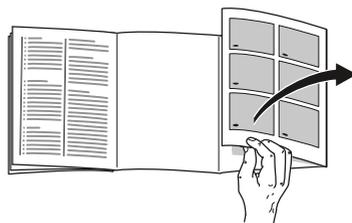

For appliances operated in non-European countries, check whether the stated voltage and current type match the values of your mains supply. This information can be found on the rating plate. Fig. 7

### Warning

Never connect the appliance to electronic energy saver plugs.

Our appliances can be used with mains and sine-controlled inverters. Mains-controlled inverters are used for photovoltaic systems which are connected directly to the national grid. Sine-controlled inverters must be used for isolated applications (e.g. on ships or in mountain lodges) which are not connected directly to the national grid.

## Getting to know your appliance

Please fold out the illustrated last page. These operating instructions refer to several models.

The features of the models may vary. The diagrams may differ.

Fig. 1

- 1 Contact sensor
- 2 Controls/light
- 3 Bottle shelf
- 4 Glass shelf
- 5 Touch-Light door handle

### Controls

- 1 **Main On/Off switch**  
Serves to switch the whole appliance on and off.
- 2 **“super” button**  
Is used to switch on the super cooling (see chapter entitled “Super cooling”).
- 3 **Temperature display**  
The numbers correspond to the set refrigerator compartment temperatures in °C.
- 4 **Temperature selection button**  
Press this button to set the temperature.

---

## Switching on the appliance

Switch on the appliance with the main On/Off switch. Fig. **2**/1

The temperature display flashes, Fig. **2**/3, until the appliance has reached the set temperature.

The appliance starts to cool, the light is switched on when the door is open.

After the appliance has been switched on, it may take several hours until the set temperature has been reached.

We recommend a factory setting of +10 °C.

### Operating tips

The refrigerator compartment temperature rises:

- if the appliance door is opened frequently,
- if large quantities of food are placed in the refrigerator compartment,
- if the ambient temperature is high.

---

## Setting the temperature

Fig. **2**

The temperature can be set from +6 °C to +14 °C.

Keep pressing temperature setting button 4 until the required temperature is set.

The value last selected is saved. The set temperature is indicated on temperature display 3.

---

## Touch Light

Fig. **5**

This appliance features a Touch Light function. When the handle on the appliance door is touched, the light switches on.

This function enables you to view your drinks without opening the door. As a result, you save energy.

If the handle was touched while the door was closed, the light automatically switches off after approx. 60 seconds. If the door was opened, the light switches off again approx. 10 seconds after the door was closed.

---

## Usable capacity

Information on the usable capacity can be found inside your appliance on the rating plate. Fig. **7**

## Note when loading products

- A total of 32  $\frac{3}{4}$ -litre bottles or 28 single-litre bottles can be placed on the bottle shelves. Fig. **8**
- This number of bottles can be stored if the bottles are placed with their necks facing forwards. Fig. **4**
- The indicated number of bottles may differ depending on the shape and size of the bottles. Fig. **8**
- To maintain a good air circulation in the appliance, the bottles must not touch the rear panel of the refrigerator compartment. Therefore store the bottles in the appliance with the bottlenecks pointing forwards. Fig. **4**
- Allow warm drinks to cool down outside the appliance.

## Drinking temperatures

The correct serving temperature is crucial for the taste and therefore your enjoyment of the wine.

We recommend serving wine at the following drinking temperatures:

Type of wine	Drinking temperature
Bordeaux red	18 °C
Côtes du Rhône red/ Barolo	17 °C
Burgundy red/ Bordeaux red	16 °C
Port	15 °C
Young Burgundy red	14 °C
Young red wine	12 °C
Young Beaujolais/all white wines with little residual sugar	11 °C
Old white wines/ Chardonnay	10 °C
Sherry	9 °C
Young white wines from late vintage	8 °C
White wines Loire/Entre-deux-Mers	7 °C

## Switching off and disconnecting the appliance

### Switching the appliance off

Fig. 2

Press the main On/Off switch 1 (red circle becomes visible).

Temperature display goes out. Fridge and light are switched off.

### Disconnecting the appliance

If you do not use the appliance for a prolonged period:

1. Switch off the appliance.
2. Pull out mains plug or switch off fuse.
3. Clean the appliance.
4. Leave the appliance door open.

---

## Cleaning the appliance

### Caution

- Do not use abrasive, chloride or acidic cleaning agents or solvents.
- Do not use scouring or abrasive sponges. The metallic surfaces could corrode.
- Never clean shelves and containers in the dishwasher. The parts may become deformed!

Proceed as follows:

1. Before cleaning: Switch off the appliance.
2. Pull out mains plug or switch off fuse.
3. Wait until the layer of frost has thawed.
4. Clean the appliance with a soft cloth, lukewarm water and a little pH neutral washing-up liquid. The rinsing water must not run into the light or through the drainage hole into the evaporation area.
5. Wipe the door seal with clear water only and then wipe dry thoroughly.
6. Rinsing water must not run through the drainage hole into the evaporation area.
7. After cleaning reconnect and switch the appliance back on.

### Note

Regularly clean the condensation channel and drainage hole, Fig. 3, with a cotton bud or similar implement to ensure that the condensation can drain.

---

## Tips for saving energy

- Install the appliance in a dry, well ventilated room! The appliance should not be installed in direct sunlight or near a heat source (e.g. radiator, cooker).  
If required, use an insulating plate.
- Select 560 mm cavity depth.  
A smaller cavity depth will result in a higher energy consumption.
- Allow warm drinks to cool down before placing in the appliance.
- Open the appliance as briefly as possible.
- To avoid increased power consumption, occasionally clean the back of the appliance.
- The arrangement of the fittings does not affect the energy rating of the appliance.

---

## Operating noises

### Quite normal noises

#### Droning

Motors are running (e.g. refrigerating units, fan).

#### Bubbling, humming or gurgling noises

Refrigerant is flowing through the tubing.

#### Clicking

Motor, switches or solenoid valves are switching on/off.

### Preventing noises

#### The appliance is not level
