touch

“To live is the rarest thing in the world. Most people exist, that is all.”

Oscar Wilde

All too often our everyday lives and dull existence consume us to the extent that while “floating down stream” we don't notice the small things and take everything that happens around us for granted. Despite the fact that these monotonous days pass-by like an endless string, such a life may seem quite comfortable and normal to us. This might last up until the moment we ask ourselves: Isn't it time for a change?

We live in a world, where the meaning of life for many comes down to our various material possessions and wealth, and we spend the most of our life energy to achieve it. Being by nature an insatiable creature, man can't stop after his achievements, and often tends to pursue things he doesn't need. In this never ending haste we can often forget about the world around as well as our inner self. As a result, many of us live with a profound feeling of unfulfillment and lack of self realisation. Sad as it sounds, we exist, live our lives, but do not actually live at all.

If you want to live in harmony, you need to remember the love of self and everything around you. All you need is to switch from a mode of 'existence' to a mode based on 'living' and put your heart and soul into everything you do whilst making yourself and others happy. Try to realise your creative ideas; prepare your favourite dish by adding new zest to it. Try to make your routine more interesting and useful and remember – small steps can be the start of a great journey.

Life is the greatest gift of fate; every day should be precious and unique and every minute is irretrievable. Appreciate this gift and simply start to live. Not tomorrow or 'next Monday', but today, right now!

introduction

"Continuous learning is the shortest way to eternal success."
O. Karadas

dear reader,

It's once again autumn and it means that new academic year has started. Students are excited to go to the institutions and load a few more tons of knowledge into their brains.

In fact one doesn't have to be a student to learn new things. The process of learning should be continuous and never ending for those who want to succeed in life. Only by making mistakes and learning new lessons one can improve and get one step closer to a big success. The failures we may face every day are actually tools that help us become stronger, wiser and in the end successful. With deep knowledge, rich experience and strong faith one can overcome most difficult challenges and feel absolute completeness upon reaching the top of his/her 'mountain'.

Bosch brand continuously sets new mountains to conquer. Our engineers, designers and other specialists improve themselves every day to provide the end-consumer with the best possible solutions that would bring a little peace of mind into their busy lives. New VitaFresh technology is one of their creations which helps you maintain a healthy lifestyle by keeping your produce up to 3 times fresher than any other standard boxes for fruits and vegetables. Another revolutionary solution that will bring your clothes back to life is our new ActiveOxygene technology. Thanks to this feature you can get rid of all unpleasant smells like cigarette smoke, sweat or perfume as well as 99.99% of all bacteria guaranteeing perfectly hygienic results even in cold water or with a steam wash.

We hope that our perfect solutions will help to improve your daily life leaving you more time for improving yourself.

Transforming Raw Materials Into Beautiful Art Pieces

Jaehyo Lee's work is a demonstration of a solid respect for raw materials and an innovative approach for displaying their characteristics.

South Korean artist Jae-Hyo Lee is a master of manipulation. He turns discarded pieces of wood into eye-catching art pieces that are not only elegant but also functional.

Incredibly sleek sculptures are the result of Jae-Hyo Lee's meticulous work: having assembled various chunks of wood, he burns and then carefully polishes them to create visual contrast and a smooth surface.

Sculptural works of Lee have always incorporated natural elements on a grand scale, from the icicle sculptures he grew using hanging thread, to the vast to arrays of dangling rocks suspended in mid-air which can be seen within his display studio in Yangpyeong, Korea. But it is his sculptural furniture which makes use of cross-sectional wood that has attracted worldwide attention.

Jaehyo Lee has never been the one to take the quick and easy options when it comes to creating his artworks as each one requires an extraordinary amount of physical work to be done to be crafted. His sculptures are produced by himself and a team of artisans from his workshop in Yangpyeong; a lot of them make use of scrap timber.

His Transformations series uses meshes of logs and bent nails, which have been planed to form cross sections that reveal the structure of the materials within.

Some of his wooden sculptures might appear as though the spaces between the trunks have been filled in with a black substance but this is merely due to the effects of charring and shadows. To apply a finishing touch to his wood and nails sculptures, Jaehyo Lee first burns the materials and then sands down the exposed faces to create a high contrasting colours.

Some of his pieces are on show in art galleries and many of his sculptures can be found in public areas such as hotel lobbies on a constant display.

Lee's works willfully play with the often-contested boundaries between modern art and design, referencing the idealist's cubes, cylinders and cones as perversions of the chaise longue, the coffee table, the lampshade, and even the humble doughnut.

More about Lee & his work

Korean artist Jaehyo Lee was born in 1965, Hapchen. Since graduating in 1992 with a BFA from the Hongik University, he has gained recognition both in his native Korea and internationally for his distinct yet intimately crafted art pieces. Combining traces of Land Art, Arte Povera and Minimalism, Lee's works cast a questioning eye over the roots of form, its function and its role within the natural world.

Revealing a subtly humorous and unsentimental attitude to nature, what unites these works is a belief that the beauty of art is a product of the labor

from whence it comes, whether it is the meticulous carving of larch trunks into the form of a perfect sphere or, equally, the precise bending and sanding of thousands of nails hammered one after another into a hunk of cut lumber.

Amongst many other distinctions, Jaehyo was in 1998 Grand Prize Winner at the Osaka Triennial and in 2002 recipient of the prestigious Irish Sculpture in Woodland commission. His works are held in public and private collections across Europe, Asia and North America.

Communicating With The Dead: Seance

A seance is a form of mediumship in which one or more people communicate with entities on another frequency.

The word Seance comes from French seance, 'seat', 'session', from Old French seoir, 'to sit.' In French, as in English, the word came to be used specifically for a meeting of people to receive spiritualistic messages, but earlier in French and English the word had been used for meetings in general.

The history of seance communication can be traced back to occult practices of the third century. However, it was during the 1800's that the seance became popular mainly due to the stardom of the Fox sisters who began a spiritualist movement.

Spiritualism is about Life After Death, the Spirit Realms. The Spiritualism movement began with what Allen Kardec termed typtology. Typtology is a mode of spirit communication in which spirits lift and tilt a table during a seance to produce rapping sounds.

In organized seances, a number of people would sit around a table, hold hands, concentrate, and ask questions of the spirits. The spirits would then answer their questions through a series of raps, or knocks, similar to someone knocking on a door. In order to question the spirits, sometimes a simple yes or no would be indicated by a prescribed number of knocks. In another method, called alphabetical typtology, letters of the alphabet were recited and when the letter that the spirit wanted to draw attention to was called, a rap could be heard; thus spelling out words, sentences, and so on. By this method, it was possible to hold lengthy, detailed conversations with the mysterious entities responsible for spirit-rapping.

The seances in the 19th century tended to be filled with theatrics. These seances usually took place in darkened parlors with a round table that sometimes moved.

Ouija or talking board is a flat board marked with the letters of the alphabet, the numbers and various symbols. It is used as a mean to communicate with spirits.

Arthur Ford & Houdini case

Arthur Ford was an American psychic, spiritual medium, clairaudient, and founder of the Spiritual Frontiers Fellowship. He gained attention when he claimed to have contacted the dead son of Bishop James Pike in 1967 on network TV. In 1928 Ford claimed to have contacted the deceased spirits of Houdini's mother and later in 1929 Harry Houdini himself.

Around 1921, Ford was a traveling Spiritualist trance medium who professed to be controlled by a spirit guide he referred to as "Fletcher." He eventually settled in New York City as pastor of a Spiritualist church. He developed a popular following, and in 1927 traveled to Great Britain. One of his lectures was attended by veteran Spiritualist Sir Arthur Conan Doyle, who enthusiastically told people the next day, "One of the most amazing things I have ever seen in 41 years of psychic experience was the demonstration of Arthur Ford."

Following her husband's death in 1926, Bess Houdini began attending seances conducted by Ford. Author Andrew Lycett suggests that Arthur Conan Doyle encouraged a "vulnerable" Bess to believe Ford's claims that he could contact the dead in order "to win an important victory for Spiritualism." In 1928, Ford claimed he was able to contact Harry Houdini's deceased mother via his spirit guide "Fletcher." A year later, he claimed to contact the deceased Houdini himself and relay the full text of a secret message Houdini proposed to convey to Bess after his death. Bess initially endorsed Ford's claims, but later repudiated them.

All About Acupuncture & Its Benefits

Acupuncture involves the insertion of very thin needles through the patient's skin at specific points on the body - the needles are inserted to various depths.

Acupuncture is said to have many health benefits:

It can help make you less stressed. By mellowing out the nervous system, acupuncture can help you feel less affected by and better equipped to manage the stressful aspects of life.

It will inspire you to get outside more. In acupuncture theory, humans are viewed as microcosms of the natural world that surrounds them. When you start thinking about health in this way, realizing the intimate relationship that humans have with nature, it inspires a desire to get outside and commune with your natural habitat.

It can give you more energy. Many people report having more energy in the hours, days and even weeks after acupuncture treatment. You may notice that you're avoiding that post-lunch coma, feeling more motivated to hit the gym, or just sensing a little extra spring in your step.

It will clear your head. In addition to the surge of physical energy that follows emerging from acu land, many people notice improved mental clarity after acupuncture. They're able to make decisions faster with greater confidence.

It can help you sleep. Insomnia is one of the most common complaints seen by acupuncturists, and acupuncture can be highly effective at helping it.

Acupuncture will lend some interesting perspective to your food choices. In acupuncture, foods are often thought about in terms of temperature. Some people, because of their constitutions or root imbalances, have a demand for warm foods while others need foods that are cool. And this can change significantly based on the seasons. Everyone is different. Acupuncture dietary theory sheds light on why some people can eat certain foods and feel unaffected while others have strong intolerance to those foods.

It will make you more patient. Acupuncture, as it works but rarely overnight, can help you combat impatience. Acupuncture is an ongoing process that requires an investment of time and a willingness to let go of our desire for instant gratification.

Acupuncture, requires a conscious commitment to understanding ourselves in a way that the majority shuns. This is a hard path towards health but ultimately the most rewarding.

Taming the wildlife. The natural choice for important occasions with accessories to match. Long dark green gabardine coat with butterfly print and vast collar.

A Park That Turns Into A Lake In Summer

Grüner See, literally “Green Lake”, is a lake in Styria, located at the foot of the snow-capped Hochschwab mountains. During winter, the lake is only 1–2 meter deep and the surrounding area is used as a county park.

It is a particular favorite site for hikers. But as the temperature starts rising in spring, the ice and snow on the mountaintops begins to melt and runs down into the basin of land below. The lake swells up to engulf the entire area including the park. During summer, the lake reaches its maximum depth of around 12 meter and is claimed to look the most beautiful at this time.

Starting July, the lake starts to recede and by winter, it is back to its original size and the park is returned once again to the hikers.

The lake gets its distinctive green coloring, and the name, from the grass and foliage beneath, and thanks to the fresh snow melt, the ice-cold water is crystal clear.

The temperature of the lake is rather cold at 4 to 8 °C, yet it's popular among divers who can observe the green meadows in the edge zone of the lake particularly in June when the water is at its highest. The alpine grasses and flowers of the meadow are visible in full bloom under the water. One can even see benches, a bridge and walking trails.

Nature connects underwater and terrestrial world in one place of indescribable beauty.

Modest Austrian town Tragoss takes tourists from around the world. It is located just five kilometers from the “Grüner See” and provides travelers eager to experience not only with the possibility to park their cars, but also comfortable cabins with all the amenities. Tragoss can be reached by public transport – every few hours of Brooke shuttle bus.

Around the Grüner See

On this circuit, you will discover the natural beauty around the Grüner See on beautifully landscaped walking trails at the foot of the Hochwab Massif. The Grüner See is 100% pure meltwater; it begins to fill up during the thaw in late April. The maximum water level (8.5 - 11 m) is usually achieved around mid-May, after which the water level drops off quickly. Until late autumn only a small part of the lake remains at its deepest. Since the water travels through various layers of limestone it is crystal clear but also very cold (4 - 6 °C). When the maximum water level is reached the Grüner See is a paradise for divers and underwater photographers.

The next stop is the Pfarrerteich, a relatively shallow pond upstream the Grüner See; then it's on to the Kreuzteich. You can reach the Gasthof Seehof, which is known for its excellent regional cuisine, via a gravel forest road. Directly behind the inn you will find the natural jewel that is the Grüner See with its emerald-green waters shining through the trees of the surrounding forest. You can use a main path that rounds the lake to fully enjoy the views or choose one of many crisscrossing trailways to make your journey shorter. For visitors who feel uncomfortable walking, there is a possibility to drive to the Gasthof Seehof.

Grüner See is the one of the most beautiful parks on the face of the planet. And once you witness this beauty, your heart will not want to let go of this piece of paradise.

Opening Ceremony Almaty

This June a ceremony was held in Almaty to mark an opening of a new BSH subsidiary, which would be engaged into sales and marketing activities in Kazakhstan region. The subsidiary will be mostly responsible for 4 brands, including BOSCH, SIEMENS, GAGENAU as well as ZELMER.

Kazakhstan's most known sales houses like Technodom, Sulpak, Mechta, as well as regional distributor Evrika, Spark, Azimuth and Immer Besser, Vektor and others as Angel will be involved into representing the brands of BSH in more than 200 stores all around the region.

At the opening of the ceremony BSH announced plans to increase its presence in the Kazakhstan market. BSH Board Member Dr. Michael Schoellhorn stood up with a speech:

"Kazakhstan is the largest market in Central Asia and BSH is ready to invest heavily in the home appliance industry. Today, the most important market in Central Asia is Kazakhstan. With our new sales and marketing subsidiary in Almaty, we assure our competitiveness in the long term. We are

sure that a wide range of innovative, energy-saving and environmentally friendly products will leave our customers pleased.

Live Kitchen event Tbilisi

This year on May 23, in Tbilisi, when the summer was just around the corner, Bosch with its loyal partner Elit Electronics held a Live kitchen event, devoted to the healthy eating.

For this event, bloggers, who were mainly women with overweight, willing to gain practical skills of cooking healthy, were invited

Chef Maya, the highly experienced professor from Georgian Culinary Academy, with the help of MUM 5 series kitchen machine, BOSCH oven HSG656XS1 and blender MMB65GOM, was teaching the participants how to prepare food that would be tasty and healthy at the same time.

After the exciting cooking session, the participants were served with delicious dinner which, in its turn, was topped up with traditional coffee and deserts.

Friendly atmosphere, tasty food and knowledge gained at "Bosch: Live kitchen" event left nobody indifferent.

Olive green in peace

Traditionally, the olive branch has been used as a symbol of peace. Its origins as a symbol of peace come from ancient Greek culture, when Athena planted an olive tree to win possession of Athens over Poseidon.

Olive green in camouflage

Digital military camouflage is made of predominantly the olive-color and consists of pixelated patterns. It was first developed during the Second World War by Johann Georg Otto Schick.

Olive green
in peridot

In Ancient times, peridot stones were used for carved talismans. Many legends state that peridot possesses a magical power to dispel night-terrors and bad dreams.

Olive green in life

According to evidence provided by archaeological findings in Mediterranean basin, wild olives were collected by people as early as 8000 BC. However, where or when olive trees were domesticated for the first time is unclear.

Archeological evidence shows that olives were turned into olive oil for the first time by 6000 BC and 4500 BC in present-day Israel. Throughout the various civilizations, the olive tree and olive oil have occupied pivotal positions in the agricultural economy of Mediterranean countries and in their commerce with neighboring populations. The Minoans of Crete were among the first cultures to achieve prosperity on olive oil. Evidence suggests that olives were grown in Crete around 2,500 BC.

The earliest surviving olive oil amphora date to 3500 BC, though the production of olive oil is assumed to have started before 4000 BC.

Olive oil had many uses in ancient Greece, differing according to social status. Poor people, for instance, did not consume olive oil but ate many cereals. The rich, on the other hand, were able to use olive oil in cooking, for cleaning their bodies and for lighting. Olive oil was also a valuable medicine in the hands of ancient Greek doctors. Hippocrates mentions 60 different conditions which could be treated with it, such as skin conditions, wounds and burns, ear infections and many others.

From the time of ancient Egypt into the modern religions, olive oil has been used in religious ceremonies and there are many citations about the olive in various holy writings, including old testament.

Tastes of a whole new life style.

The new Series 8 built-in appliances designed for your taste in every sense!

BOSCH

Invented for life

Push The Limits Of Your Stamina

Paintball is a fun competitive sport that mainly focuses on teamwork and the spirit of adventure.

Competitive tournaments have been going on almost since the beginning of the sport. The first major paintball tournament was held in 1983, with the team based in Canada.

Paintball is a relatively new sport. It has come into popularity nearly 30 years ago. The fundamental idea behind the paintball game was to recreate the excitement of outdoor hunting and survival of the fittest.

Story of how paintball was created goes back to the late 1970s. A group of friends, Hayes Noel, Bob Gurnsey and Charles Gaines had been discussing for years survival in the woods. The debate went back and forth until 1981, when a friend discovered the Nelson Paint Company painting pistol in a farming catalog. With the equipment chosen, Noel and Gurnsey sat down and wrote the rules to what they called "The Survival Game".

The first paintball game was played on June 7th, 1981, in the New Hampshire woods. The twelve players in that first game included Gaines, Gurnsey and Noel. Each participant had a pistol, some extra tubes of oil-based paintballs, and goggles. Multiple flag stations were placed over an 80 acre area, with 12 different colored flags at each station. Whoever collected all twelve of their flags first or was the last player not eliminated was the winner.

As interest was increasing steadily among the neighborhood, potential of this new paintball concept was further spotlighted by the friends. Eventually Gurnsey founded the new sport called the National Survival Game, and then contracted with Nelson Paint Company to become the exclusive distributor of its guns and paintball equipment.

Originally developed as an outdoor sport, today, paintball is played in outdoor and indoor fields. The game can be played with any number of people, but paintball is generally a friendly competition, typically played with 2 teams of about 5-12 people.

Everyone is equipped with a protective mask to protect eyes, face and ears. Players use markers and shoot balls, made with a gelatin coating, which break on impact, leaving a stain. This painting is completely biodegradable, non-toxic and usually washable, thus with protective gear, there is really no need to worry about danger.

There are many different types of paintball games such as capture the central flag, last man standing, capture the opposing team's flag.

MOOR

Genre: Drama
Director: Jamshed Mahmood Raza
Stars: Joshinder Chaggar, Nayyar Ejaz, Sonia Hussain
Language: Urdu, English
Release date: 2015
Runtime: 100 min.

"A truly pleasurable experience."

blastingnews.com

Moor, a movie directed, produced and written by Jamshed Mahmood Raza aka Jami, is a drama based on the story of Railway system of Balochistan back in 1984. Actor Hameed Sheikh as Wahid and Shaz Khan as Ehsaan play the lead characters. The rest of the cast includes Samiya Mumtaz as Palwasha, Ayaz Samoo as Imtisal, Abdul Qadir as Baggoo Baba, Soniya Hussain as Amber, Shabbir Rana as Zahir and Sultan Hussain as Lalu. Jami, the director himself, and Eshita Mehboob Syed play small roles in the movie.

The acting of all the actors is remarkable as they are trying hard to get into their respective roles. Industry Veteran Hameed Sheikh is truly a gem who makes powerful appearance throughout the movie. Shaz Khan who plays the role of Ehsaan also impresses with his acting skills. He is certainly going places after his fabulous debut. As for supporting roles, Samiya Mumtaz and Ayaz Samoo do justice with their roles but one guy who stole the show is Abdul Qadir who plays the role of Baggoo Baba. The character of Baggoo is amazingly placed and it makes you smile whenever you think the movie is being dragged.

Plot

When his wife dies unexpectedly, Wahid, a poor train station master of a small, remote town in Pakistan, must come to terms not only with her death and his own childhood personal demons, but also his complicity in the events that led up to it. He must choose between facilitating a web of corruption involving his own elder brother that might provide him a more comfortable life but which threatens to destroy his beloved railways and morals on the one hand, and saving his estranged son caught in a similar conflict for a better life in the big city on the other. Set against the backdrop of the deliberately engineered decline of the railways system in Pakistan, 'Moor' is a story about the meaning of loyalty - to one's land, one's family and one's principles.

The film's title, Moor, is a Pashto word (a South-Central Asian language) meaning "Mother".

History of toasters

The practice of browning bread is an ancient tradition.

You probably use a toaster in your life. Perhaps, frequently say, on a daily basis. But have you ever wondered about the history of this simple appliance that quickly heats your bread, waffles and pastries for breakfast?

Early civilizations placed bread over an open fire in order to keep the bread from growing mold. The Romans brought the idea back from Egypt in 500 B.C. and then took it to Great Britain when they invaded in A.D. 44.

In the eighteenth century, a hinged fork was used to hold the bread and prevent it from falling into the fire. With the introduction of wood and coal stoves in the 1880s, a new toasting method was needed. This led to a tin and wire pyramid-shaped device. The bread was placed inside and the device was heated on the stove.

Fire was the source of heat for toasting bread until 1905 when Albert Marsh, an engineer, created an alloy of nickel and chromium, called Nichrome. Marsh's invention was easily shaped into wires or strips and was low in electrical conductivity. Within months, other inventors were using Nichrome to produce electric toasters. Five years later, General Electric received the first patent for an electric toaster. At first, the electric toaster was primarily used in restaurants as the majority of homes had limited access to electrical power. In most cases, electricity was not available during the day time.

The first toaster with a timer circuit appeared in the 1920s. In 1930, the Proctor Electric Company produced an automatic toaster with a timing strip. By the end of the 1940s, the Sunbeam Corporation had improved the sensor control, so that when the bread reached 154°C the sensor automatically turned off the heating unit.

In the late 1970s, the development of heat-resistant plastics offered more options for toaster design. Models with rounded sides in a variety of colors became popular. Wider slots for bagels and thick slices of bread also appeared, as well as models with up to six slots for multiple toasting.

By the twenty-first century, "smart toaster" has become a frequently used term. And today, Bosch Styline series toaster is one of the best smart toasters around. Styline toaster comes with many new features. MirrorHeating is one of them: unlike standard heating elements, 4 quartz elements of Styline, evenly distribute the heat along the toast, providing thus perfect results. Another feature is AutoHeatControl. This feature measures the temperature inside the toasting chamber and adjusts the toasting time to ensure a consistently even toasting result. Last but not least feature is Defrost function. Thanks to this function, bread that was just taken out of freezer can be defrosted in a matter of seconds. After defrosting toaster automatically starts roasting process in selected mode. Right after you have the perfect golden color on your toast, you might as well have an equally perfect cup of coffee or tea of course, prepared by Styline coffee maker and kettle.

The smart headset allows mute people to voice their thoughts

The number of people deprived of the gift of speech for a variety of reasons is more than tens of millions of people according to the statistics. And that's not including deaf people for whom expressing their thoughts aloud is a matter of a big concern, as well.

Now, what would happen if they regained the opportunity to share their thoughts with others? A company named Smartstones is working on a software that can make this dream a reality.

The basis for the project was taken from Emotiv headset. It reads the brainwaves of a person and

then transmits them to the smartphone which in its turn turns them into words.

The easiest way for the human brain to keep track of its intention is to perform a particular movement. For example, to lift a leg or nod your head. The headset remembers certain patterns and associates them with specific words. Of course, to talk in full sentences with the help of this gadget will be quite difficult but people will be able to say some of the most important phrases almost immediately. We need only to recall the combination of the thoughts tied to a particular word.

At the moment the headset is being actively tested on mute people, including those who are completely paralyzed. The first results of a research held with a group of people have proved to be very impressive as one of the participants was almost immediately able to express his thoughts using a headset.

Pancakes With Apples

Autumn is the time of the year when getting up to the smell of fresh-cooked pancakes on the Sunday morning becomes the most precious. Well-nourishing and tasty pancakes, nobody can refuse trying!

With the MUM 5 series kitchen machine the dough for pancakes will be mixed smooth and without lumps in seconds.

INGREDIENTS

For pancakes

- 1 1/2 cups flour
- 3 1/2 teaspoons baking powder
- 1 teaspoon salt
- 1 tablespoon white sugar
- 1 1/4 cups milk
- 1 egg
- 3 tablespoons butter, melted

For topping

- 2 apples pilled and sliced
- 1/2 cup white sugar
- 1 tablespoon ground cinnamon
- 2 tablespoons water

PREPARATION

In a large bowl of mixer of MUM 5 series kitchen machine mix together the flour, baking powder, salt and sugar. Make a well in the center and pour in the milk, egg and melted butter; mix until smooth. Heat a lightly oiled frying pan high heat. Pour the batter onto the griddle, approximately 1/4 cup for each pancake. Brown on both sides and serve hot.

In a saucepan, combine the apples, sugar, cinnamon and water. Stir to dissolve sugar, and bring to a boil. Reduce the heat to low, and simmer for 10 minutes, or until apples are soft and syrup has thickened. Pour on pancakes.

With Styline, every morning is a good one!

Would you like your golden color toast with a well-boiled green tea or a cup of exquisite coffee? Either way, your breakfast is going to be perfect, so does your mood!
