OUR RECIPE FOR MORE COOKING PLEASURE: OVENS FROM JUNKER.

Your advantages:

STEAM ASSISTANCE

Crisp and crunchy on the outside, juicy inside: the steam assistance feature ensures that your roasts, bread and other dishes will come out simply perfect. Just fill up the water tank incorporated in the panel and combine the heating type suggested in the recipe with steam assistance. The supply of steam is controlled automatically and ensures baked items and roasts will be sensational.

- › Perfect for reheating cooked food or crisping up bread and pastries from the previous day

40 AUTOMATIC PROGRAMMES

With Junker's automatic programmes dishes will succeed like magic. Whether cooking fish or meat: Simply put the food in the oven, select the right dish and weight and press Start.

- › Simple to set
- › Perfect result

COMFORT SCROLL CONTROL

With the comfort Scroll control the oven can be operated by just tapping or sliding your finger along the controls. An uncomplicated way to select the heating type and temperature without any knobs or buttons. The control panel is now much easier to clean.

- › Intuitive method of appliance operation
- › Control without knobs or buttons

RAPID HEATING

Rapid heating feature ensures preheating times that are up to 30% shorter – with the same energy consumption. Select temperature and rapid heating function. Once the required temperature has been reached, an audible signal will remind to choose the type of heating.

- › Quickly ready for use
- › Highly efficient

PYROLYTIC SELF-CLEANING

At the touch of a button, all deposits from baking, roasting and grilling turn to ash at high temperatures – simply wipe off with a cloth. 3 different settings are available to ensure optimum cleaning of the oven, depending on the type of soiling.

- › No chemicals needed
- › Works even with stubborn deposits

FULLY GLAZED INSIDE DOOR WITH SOFT CLOSE

The Junker soft close function closes the oven door with a quiet, gentle movement. The fully glazed inside door offers an excellent view of what's inside and is really easy to clean.

- › Oven door closes with a quiet, gentle action
- › Easy cleaning because of fully glazed surface

The steam assistance is done via a convenient water cartridge merged into the display.

FULL STEAM AHEAD FOR OVENS.

Junker's new ovens appearing in elegant black glass design will make cooking a pleasure even before starting. On top there's a wide range of functions. With up to 40 automatic programmes and the new steam assistance food will be cooked to perfection.

MORE FREEDOM IN THE KITCHEN.

Cooking is most fun if there's enough space for preparing. Junker is offering cooktops for every taste. No matter if a large pan, huge casserole or small pots – on a Flex Induction hob every item has its place – and can be moved flexibly. Thanks to Induction the cooktop heats only where needed.

VARIETY FOR EVERY TASTE – HOBS FROM JUNKER.

Your advantages:

FLEX INDUCTION

Cooking becomes even more flexible with the new Flex Induction. Position the pots and pans on the rectangular Flex Induction zone exactly where wanted – the shape and size of the cookware will be detected automatically and heated precisely at this spot.

- For maximum flexibility when cooking
- Depending on size, up to 3 pots and pans possible on 1 Flex-Zone at the same time

COMBINED INDUCTION

Two cooking zones can be used together as one, perfect for very large cookware. Both the 21 cm hotplates can of course also be used separately.

- Great flexibility when cooking
- Allows large cookware to be used

INDUCTION

The bottom of the pan is directly heated by the induction coil. Heat is only produced where it's needed – in the bottom of the pan. This means short boiling times, greater safety and a lot less cleaning.

- Fast, safe and easy to clean
- Short times for heating up and cooling down mean more time saved

EXTENDED COOKING ZONE INDUCTION

You can finally also enjoy the advantages of Power induction when cooking with a roaster. It is not necessary to activate this function. The roaster is detected and the extended cooking zone activated automatically.

- Also for oval and rectangular cookware
- No additional activation required

JOG DIAL

With the Jog dial a hot plate can be easily operated by sliding your finger along the controls. The cooking zones might be adjusted from one to nine.

- Highly intuitive operation

RESIDUAL HEAT INDICATOR

The residual heat indicator helps you to see which cooking zones are still hot at a glance. This allows you to take full advantage of the heat still present, and the risk of burnt fingers is reduced.

- Warning indicator for hot cooking zones

More power for the hob. Thanks to Power Boost function the time required to heat water or food is reduced up to 20%.

A VISIBLE CELEBRATION – THE 2 IN 1 SOLUTION FOR COOKING PLEASURE.

Your advantages:

INTEGRATED VENTILATION

The new cooktop with integrated ventilation is placed frameless on the worktop. The integrated ventilation includes an intensive level and can easily be activated by a finger tip on the symbol.

- Available in 60 cm or 80 cm width
- Easy take-out of dishwasher-suitable grease filter
- Modern design for an unlimited view in the kitchen

INDUCTION

The bottom of the pan is directly heated by induction. Heat is only produced where it's needed – in the bottom of the pan. This means short boiling times, greater safety and less cleaning.

- Fast, safe and easy cleaning
- Quick heating up and cooling down saves a lot of time

TOUCH CONTROL DISPLAY

Touch Control Display with LED Indication enables a quick and comfortable use. Up to nine power levels and the additional Power Boost function are flexibly selected by a finger tip on the symbol.

- Electronic alarm clock and child lock can be controlled via display
- Handling without knobs and buttons

FROM AMATEUR TO CHEF DE CUISINE.

The new Junker cooktops with integrated ventilation are a real asset for every design lover. Stylish and framelessly installed on the worktop these cooktops enable a unlimited view through the overall location. Technically state-of-the-art even food-preparation becomes a major pleasure moment.

CLEAN AIR AND ELEGANT DESIGN. EXTRACTOR HOODS FROM JUNKER.

Your advantages:

POWER

Junker extractor hoods with a fan output of up to 730 m³/h filter out all vapours produced during cooking and frying – ensuring fresh air in the kitchen at all times.

- › Fresh air in the kitchen at all times thanks to powerful motors

LED LIGHTING

The innovative LED lights of extractor hoods from Junker ensure even more light for the hob. Another bright spot: These long-lasting lights consume very little energy.

- › Very energy-efficient
- › Bright light

QUICK-MOUNTING FIXTURE

Quick and simple: With the innovative installation system, Junker makes fitting extractor hoods even more precise, convenient and safe. The hood can also be aligned horizontally and vertically after drilling.

- › Fast, simple and versatile mounting

ENERGY EFFICIENCY

Thanks to a modern motor, our extractor hoods boast good energy-efficiency ratings and economically remove all odours produced during cooking.

- › Especially efficient
- › Clean air, low consumption

CIRCULATING AIR MODE

Circulating air mode in an extractor hood is based on the principle of air exchange. Instead of discharging the kitchen fumes extracted outside via an exhaust duct and supplying fresh air through a window, the circulating air mode system filters and cleans the air and then returns it to the room. Air thus constantly recirculates in a continuous cycle.

- › No complicated exhaust duct system required

EXHAUST AIR MODE

Extractor hoods based on the exhaust system are powerful and effective. Odours, grease and steam are extracted, filtered and routed outside via an exhaust duct. What's important here is an adequate supply of fresh air.

- › Vapours channelled directly outside
- › Powerful and effective

FLAT KITCHEN HOODS

Flat kitchen hoods are installed in the wall unit and feature an almost invisible construction. The handle strip increases the intake area to twice the size.

- › Discreet and almost invisible

ISLAND HOOD

Our powerful yet quiet island hood is mounted above kitchen island units. With a timelessly attractive design, it doesn't just specialise in delivering clean air, but will also be a real eye-catcher in your kitchen.

- › An attractive and effective central feature of the kitchen

WALL-MOUNTED HOODS

A wall-mounted hood is generally fitted between the wall units above the hob. This means it blends in perfectly with your kitchen units, while ensuring good ventilation that is hardly noticeable – apart from its efficiency.

- › Good ventilation, blending in perfectly with your kitchen design

Extractor hood

A BREATH OF FRESH AIR.

Extractor hoods from Junker allow to fully concentrate on the cooking as they are efficient, powerful and quiet. Whatever model you opt for, these hoods will always supply you with fresh air.

IT'S MORE THAN DISHES THAT SHINE.

With dishwashers from Junker there's a relaxing atmosphere even after cooking – due to their efficient water consumption, three special functions and up to six programmes. When running, they are no louder than calm music. With their clean lines and appealing design, these dishwashers will fit in every kitchen.

QUICK, CLEAN AND DRY – WHATEVER KIND OF DISHES

Your advantages:

VARIO SPEED PLUS

The Vario Speed Plus function shortens dishwashing time by up to 66 % while still ensuring optimum cleaning and drying of your tableware. It's the best option for washing and drying a full load of dishes very quickly.

• Reduces dishwashing time by up to 66 %

HYGIENE PLUS

By adding the Hygiene Plus option a higher temperature is maintained during the washing cycle over a longer period. This ensures best antibacterial cleaning results.

• For hygienic cleaning results

RACKMATIC

With Rackmatic the top basket of your dishwasher can be conveniently set to one of three different levels, even when already loaded – with an adjustment range of up to 5 cm. Just press on the side levers.

• Flexibility for individual adjustments whatever kind of load

EXTRA DRY

Sparkling clean, super dry. The Extra Dry option delivers outstanding results, including with tableware that is difficult to get dry. Even items made of plastic or synthetic materials will be dried perfectly.

• For optimum drying results

DOSAGE ASSIST

Thanks to Dosage Assist the dishwasher tab falls directly into a little collection tray. A targeted jet of water quickly dissolves the tab in a controlled manner. The detergent is distributed evenly throughout the machine, always guaranteeing optimum cleaning results.

• Optimum dishwashing results, using the full effect of the detergent
• Usable for powder and gel detergents

MACHINE CARE

In the special programme "machine care" a selected detergent is placed in the empty appliance and then the programme is started. After finishing, the dishwasher is free from grease and limescales and ready for the next cycle.

• Frees the appliance from grease and limescales

1H PROGRAMME

For everyday needs. If it has to be faster, the 1h programme is just the right choice. Within one hour the clean dishes are set back on the table.

• Brilliantly clean in one hour with 65°C rinsing temperature

COOL PROSPECTS WITH FRIDGES FROM JUNKER.

Your advantages:

NO FROST: NO MORE DEFROSTING

The No Frost technology in the freezer section reliably prevents ice formation on interior walls, food and packaging. Thus, no more time-consuming defrosting by hand.

• No ice formation, never defrost again

LED LIGHTING

The extremely long-lasting LED lights ensure bright, even light distribution throughout the cooling zone. They do not become hot, so saving significant energy.

• Perfect illumination of the refrigerator
• Very energy-efficient

LOW FROST

The Low Frost technology reduces ice or frost formation in the freezer compartment and distributes it more evenly. This reduces energy consumption and means that defrosting is considerably faster than with conventional systems.

• Less ice formation, faster defrosting

VARIO ZONE

The Vario Zone in the freezer compartment now offers even greater flexibility when storing food. Both the drawers and the glass inserts in between can be easily taken out.

• For even more space and flexibility

BIG BOX

With our transparent freezer drawers you can keep an eye on everything. A highlight: the 29 cm high Big Box. It offers loads of space, e.g. for large portions of frozen food or several pizzas.

• More room, a better overview

SUPER FREEZING

To prevent frozen items from starting to defrost when you add new food, you can simply activate the super freezing function up to 24 hours in advance. The appliance will automatically cool down to as little as -30°C so that the freezing process is not interrupted if new food is put in while still warm.

• Faster freezing even of large quantities thanks to automatic cooling

VARIO TRAY WITH WAVY BASE

The Vario tray has a moulded, corrugated base whose grooves are perfect at collecting any moisture occurring when fruit and vegetables are stored.

• Fruit and vegetables stay fresh and crisp

FLAT HINGE

Flat hinge technology creates a secure connection between the furniture door and the door of the appliance. These hinges are highly resilient and allow the door to open to a very wide angle. At an opening angle of less than 20° , the door then closes automatically, preventing it from being accidentally left open.

• Convenient connection

SLIDING HINGE

A sliding hinge creates a sliding connection between the cabinet and appliance door and allows for fine adjustment in terms of depth and height. When appliances are replaced, it ensures that new equipment will fit into niches and behind front panels.

• Sliding connection between the cabinet door and the refrigeration appliance door

HAPPY AND HEALTHY FRESHNESS.

Refrigerators from Junker are extra-spacious to ensure all food remains fresh and crisp for a long time. Thus, no more time-consuming defrosting by hand.
