Protection of the environment/conservation tips

- Utilise the maximum load of washing for each particular programme.
- Wash normally soiled washing without prewash.
- Instead of **Cotton 90 °C** programme select **Cotton 60 °C** and **ecoPerfect** option. Comparable cleaning result with significantly lower energy consumption.
- Detergent dosage using the intelligent dosage system helps save detergent and water.
- Energy saving mode:** The display panel light goes out after several minutes, **Start/Reload** flashes. To activate the light, select any button.
- If the washing is then dried in the tumble dryer, select spin speed according to the instructions of the dryer manufacturer.

Automatic stain treatment

Special treatment of 16 different stain types possible. No pretreatment of the stains is required – washing machine adjusts the washing process. → Page 10

Intended use

- for household use only,
- for washing machine-washable textiles and hand-washable wool in the appropriate detergent,
- to be operated with cold drinking water and commercially available detergents and care products which are suitable for use in washing machines.

- Do not leave children unattended near the washing machine!
- Children must not use the washing machine!
- Keep pets away from the washing machine!

- With dry hands only!
- Take hold of the plug only!

- Turn on the tap

Preparing your washing machine

Correct installation according to separate Installation/Maintenance instructions.

- Checking the machine**
 - Never switch on a damaged machine!
 - Inform your customer service!

- Insert mains plug**
 - With dry hands only!
 - Take hold of the plug only!

- Turn on the tap

Before 1st wash

- Fill dispensers i-Dos 1 and i-Dos 2 → Page 11

- Wash once without any washing

- To prevent unused detergent from flowing into the outlet during the first wash: Pour 1 litre of water into dispenser and start the **Empty** programme.
- Wash once using **Cotton 90 °C** programme **without any washing**.

Before each wash

Open the washing machine door

Safety instructions

- Read the instructions for use and the Installation/Maintenance instructions and all other information enclosed with the washing machine and act accordingly.
- Retain documents for subsequent use.

Risk of electric shock – Never pull out the mains plug by tugging the power cord. – Insert/pull out the mains plug with dry hands only.

Danger to life On redundant appliances:
– Pull out the mains plug!
– Sever the power cord and discard together with the plug.
– Destroy the lock on the washing-machine door. This will prevent children from locking themselves in and suffocating.

Risk of suffocation – Keep packaging, plastic film and packaging parts out of the reach of children.

Risk of poisoning – Keep detergents and care products out of the reach of children.

Risk of explosion – Caused by detergents containing solvents, e.g. stain remover/ items of washing pretreated with solvent naphtha may result in an explosion after being loaded into the washing machine. First rinse items thoroughly by hand.

Risk of injury – Washing machine door may become very hot.
– Caution when draining hot detergent solution.
– Do not climb on the washing machine.
– Do not lean on the open washing machine door.
– Do not reach into the drum in case it is still rotating.

Consumption values

* Programme setting for testing and energy labelling in accordance with directive 92/75/EEC.
** Programme setting for test according to currently valid European standard 60456. *Information about comparability tests:* To test the test programmes, wash indicated load size at maximum selectable spin speed. As a **short programme** for coloureds select the **Mix 40 °C** programme at maximum selectable spin speed.

*, ** Programme setting for tests: set intelligent dosage i-Dos 1/i-Dos 2 to – (OFF), manually dose washing powder via dispenser .

*** The values may deviate from the stated values depending on water pressure and hardness, room temperature, type and amount of laundry, detergents used, fluctuations in the mains voltage and selected additional functions.

Important information

Protecting the washing and the machine
– When determining the dosage of all washing powders, additives and cleaning agents, you must follow the manufacturer's instructions.
– Empty pockets.
– Remove metal parts (paper clips, etc.).
– Wash delicates in the net/bag (tights, curtains, underwired bras).
– Close zips, button up covers.
– Brush sand out of pockets and collars.
– Remove curtain fittings or include in the net/bag.

Loading the laundry
– To ensure an optimum spin performance, load large and small items of washing.
– Individual items may cause excessively large imbalances.
– Do not jam items of washing between the washing machine door and rubber seal.

Soaking *Load washing of the same colour.*
Dose detergent with i-Dos or pour into dispenser  according to manufacturer's instructions. Select the required programme. Select **Start/Reload**. After approx. 10 minutes select **Start/Reload** to stop the programme. After the required soaking time, select **Start/Reload** again. Programme continues.

Starching *Washing should not be treated with fabric softener.*
Select **Rinse/Spin** programme. Manually pour liquid starch into the  /  dispenser according to manufacturer's specifications (if required clean beforehand). Select **Start/Reload**.

Dyeing/Bleaching
Dye in household quantities only. Salt may attack stainless steel! Observe specifications of the dye manufacturer! Do not bleach washing in the washing machine!

Load display
The load sensor detects the load level in the washing machine. The washing is not balanced.

Load adjust
Independently of the load display, the load adjust. uses other sensors to optimally adjust the water and power consumption and the programme duration in each programme – depending on textile type and load.

Reload
Select **Start/Reload** button if you want to add more items of washing after the programme starts. The machine checks whether a top-up is possible. Follow the information on the display panel. At a high water level and/or temperature or while the drum is rotating, the washing machine door remains locked for reasons of safety. To continue the programme, select the **Start/Reload** button.

Childproof lock/appliance lockout ON-OFF, display symbol 
The washing machine can be secured to prevent the set functions from being unintentionally changed.

Activate: Press the **Menu** button for 5 seconds. Symbol  is lit.
Deactivate: Press the **Menu** button for 5 seconds.

– If the programme selector is moved after start: Symbol  flashes.
First move programme selector back to the original programme, then deactivate.
– Childproof lock can remain activated until a programme is next started, even after the machine is switched off (name of the programme last run is indicated on the display panel). Then deactivate the childproof lock before the programme starts and, if required, re-activate after the programme starts.

Programmes with prewash, display symbol 
Prewash can be selected in certain programmes. For **intelligent dosage i-Dos**: Selected detergent is used for prewash and main wash. To avoid an unnecessary overdosage of detergent for prewash/main wash, we recommend the setting normal for the dosage.

Manual dosage: Divide detergent for prewash and main wash. Put detergent for prewash in the drum and pour detergent for main wash in dispenser .

Do not use any detergents containing bleach for coloured textiles.

Information on programmes/Options

Automatic programmes
The degree of soiling and the type of washing are automatically detected and the washing sequence as well as intelligent dosage are optimally adjusted.
– Automatic: for durable textiles
– Automatic soft: gentler treatment of washing

Outdoor + Impregnation The laundry must not be treated with fabric softener.
Special detergents and textile-guard agents suitable for machine wash available in particular from sports shops. Dosage according to manufacturer's instructions.

1. Set programme selector to **Outdoor**. Load the drum.
2. Dose special detergent for outdoor textiles in dispenser  / .

3. Select **Start/Reload**.
4. Programme stops before textile-guard step.
5. Dose textile-guard agent in dispenser  / .

Select **Start/Reload**. After-treatment of the washing according to manufacturer's instructions.

Rinse/Spin
For this combined **Rinse/Spin** programme a rinse cycle is preset under the **Extra rinse** programme option. → Page 6 If only a spin cycle is required, set **Extra rinse** to **OFF**.

Stain selection
Do not let stains dry. Remove solid substances beforehand. Arrange items of washing as usual and load washing machine. Select a stain type (cannot be combined).
A total of 16 different stains can be selected. The washing machine adjusts the washing temperature, drum movement and soaking time specific to the type of stain. Hot or cold water, gentle or intensive washing control and long or short soaking provide the wash programme with a special sequence for each type of stain.

Select stain selection by pressing the **Menu** button; select stain by pressing the; **+/- Select** buttons.

The result: stains are treated optimally.

Stains
baby food **cosmetics** **grease + oil** **strawberry**
blood **dirty socks** **orange** **sweat**
chocolate **egg** **red wine** **tea**
coffee **grass** **soil + sand** **tomatoes**

2 stain programmes explained in detail (examples)
egg Soaking in a lukewarm water bath, selected wash cycle with higher water level and additional rinse cycles to remove particles.

blood Blood is first "dissolved" in cold water, then the selected wash programme starts.

For the other stains we have developed comparable solutions in intensive studies.

Intelligent Dosage System (i-Dos)

Switching on the appliance
The appliance has been preset at the factory for the dosing of a liquid detergent and a softener, indicated by corresponding changeable inserts in the fill covers:
–  Color detergent, pre-installed,
–  Softener only i-Dos 2, pre-installed,
–  Standard/universal detergent, enclosed.

Instead of softener, a second liquid detergent can also be used in dispenser i-Dos 2. → Page 13
The changeable inserts can be changed as required.

Filling dispenser
1. Open detergent drawer.
2. Open fill cover.
3. Add detergent/fabric softener. Do not fill above the **max** mark.
4. Close fill cover.
5. Slowly push in detergent drawer.

Once the appliance is switched on, the completely inserted drawer is indicated by:
– A small display on the handle is lit when intelligent dosage i-Dos 1/i-Dos 2 is selected. → Page 11
– Display flashes once if intelligent dosage is not selected. → Page 11

i When selecting your detergent and care product, follow the manufacturers instructions. We recommend the use of standard, universal and color liquid detergents for all machine-washable, coloured textiles made of cotton and synthetic materials.
– Use liquid products only.
– Do not use any solvent-based, corrosive or gas-emitting products (e.g. liquid bleach).
– Do not mix detergent and softener.
– Do not use any superimposed or highly thickened products.
– To prevent product from drying, do not leave the fill cover open for a long time.

illuminated displays in the drawer handle
– Display **is lit** if intelligent dosage is selected for the dispenser.
– Display **flashes** if level below minimum.
– Display **flashes briefly** when drawer has been inserted correctly (if intelligent dosage not selected).
→ separate *Installation/Maintenance instructions*, Page 9

Intelligent Dosage System (i-Dos)

Selecting and deselecting intelligent dosage/adjusting dosage strength
The intelligent dosage of detergent and softener is selected in the factory for all permitted programmes. → Page 7 (dosage strength normal) and can be changed individually for each programme.
In addition to intelligent dosage, washing additives (e.g. stain remover) can be added manually via dispenser .

Changing dosage strength:
1. Select dosage menu by pressing **i-Dos 1/i-Dos 2** buttons.
2. Select required dosage strength by pressing; **+/- Select** buttons. Indicator lamp in the drawer handle goes out when the setting is **OFF**.

The selection (ON/OFF) of i-Dos 1 and i-Dos 2 is retained for each programme until the next change occurs, even if the machine is switched off.

Reloading detergent/softener
The flashing of the associated illuminated display when intelligent dosage is selected and a corresponding message on the display panel indicate that the level is below the minimum. There are still enough contents for approx. 3 washes.
The same detergent or softener can be topped up at any time. If the product/manufacturer is changed, we recommend cleaning the dispensers beforehand → separate *Installation/Maintenance instructions*, Page 8, 9, and, if required, adjusting the basic dosage.

Standard settings i-Dos
If required, change basic dosages for detergent and softener.
The basic dosage is the dosage of detergents and softeners for an average domestic load. The basic dosage to be set corresponds to the recommendation of the detergent or softener manufacturer (normal soiling, average softness, average domestic load for the existing water hardness).
This information can be found on the package label of the detergent/softener or ask the manufacturer directly.
To determine the existing water hardness, use a test strip or check with your water supply company.

My water hardness:
Factory setting of the basic dosage: detergent 75 ml/softener 36 ml

To adjust the basic dosages:
1. Press **Menu** button to select menu option **i-Dos1: basis** or **i-Dos2: basis**.
2. Press **+/- Select** buttons to set the basic dosage (10 ml – 200 ml).

hold down button = quick run through

Intelligent Dosage System (i-Dos)

Converting i-DOS 2 dispenser contents
Instead of softener, a second liquid detergent can also be used in dispenser i-DOS 2.

1. Press **Menu** button to select **i-Dos2: content**.
2. Press **+/- Select** buttons to switch between softener and detergent.

i – An additional changeable insert for a second detergent is enclosed and can be fitted in the fill cover. → Page 11
– When the dispenser contents are changed, the basic dosage is reset to the corresponding factory setting. If required, adjust the basic dosage.

Manual dosage in dispenser 
1. Set intelligent dosage to – (OFF). → Page 12
2. Dose in dispenser  according to amount of washing, manufacturer's specifications and existing water hardness.
 /  = Powder/liquid detergent

i – Do not manually dose liquid detergent for programmes with **Pre-wash**  and/or with **End time** programme option.
– For programmes with **Pre-wash**  pour in detergent. → Page 9
Do not open detergent drawer while water is being supplied.

Customer service
If you cannot rectify the fault yourself (→ separate *Installation/Maintenance instructions*, *What to do if ...*), please contact our customer service. We will always find a suitable solution to avoid unnecessary visits by technicians.
You can find the contact data for your nearest customer service here or in the customer service list (depending on model).
– **GB** 0844 8928999
– **IE** 01450 2655
Please give customer service the product number (E-Nr.) and the production number (FD) of the appliance.

Product number Production number
E-Nr. **FD**

Rely on the competence of the manufacturer. Contact us.
You can therefore be sure that the repair is carried out by trained service technicians who carry original spare parts.

These instructions can be found on: inside of washing machine door * / open service flap * and rear of the appliance.
* depending on model

Siemens Electrogeräte GmbH
Carl-Wery-Str. 34
81739 München/Germany

Safety instructions

- Read the instructions for use and the Installation/Maintenance instructions and all other information enclosed with the washing machine and act accordingly.
- Retain documents for subsequent use.

Risk of electric shock – Never pull out the mains plug by tugging the power cord.
– Insert/pull out the mains plug with dry hands only.

Danger to life On redundant appliances:
– Pull out the mains plug!
– Sever the power cord and discard together with the plug.
– Destroy the lock on the washing-machine door. This will prevent children from locking themselves in and suffocating.

Risk of suffocation – Keep packaging, plastic film and packaging parts out of the reach of children.

Risk of poisoning – Keep detergents and care products out of the reach of children.

Risk of explosion – Caused by detergents containing solvents, e.g. stain remover/ items of washing pretreated with solvent naphtha may result in an explosion after being loaded into the washing machine.
First rinse items thoroughly by hand.

Risk of injury – Washing machine door may become very hot.
– Caution when draining hot detergent solution.
– Do not climb on the washing machine.
– Do not lean on the open washing machine door.
– Do not reach into the drum in case it is still rotating.

Consumption values

Programme	Option	Load	Current***	Water***	Programme duration***
Cotton 30 °C**		8 kg	0.35 kWh	57 l	2:06 h
Cotton 40 °C**		8 kg	0.97 kWh	57 l	2:16 h
Cotton 60 °C**		8 kg	1.36 kWh	57 l	2:26 h
Cotton 60 °C	ecoPerfect*	8 kg	1.03 kWh	56 l	3:25 h
Cotton 90 °C		8 kg	2.34 kWh	68 l	2:16 h
Easy care 40 °C**		3.5 kg	0.55 kWh	41 l	1:35 h

Delicate 30 °C		2 kg	0.14 kWh	35 l	0:41 h
Wool – – (cold)		2 kg	0.06 kWh	40 l	0:40 h
Wool 30 °C		2 kg	0.16 kWh	40 l	0:40 h

- * Programme setting for testing and energy labelling in accordance with directive 92/75/EEC.
 ** Programme setting for test according to currently valid European standard 60456. *Information about comparability tests:* To test the test programmes, wash indicated load size at maximum selectable spin speed. As a **short programme** for coloureds select the **Mix 40 °C** programme at maximum selectable spin speed.
 *, ** Programme setting for tests: set intelligent dosage i-Dos 1/i-Dos 2 to – (OFF), manually dose washing powder via dispenser .
 *** The values may deviate from the stated values depending on water pressure and hardness, room temperature, type and amount of laundry, detergents used, fluctuations in the mains voltage and selected additional functions.

Important information

Protecting the washing and the machine

- When determining the dosage of all washing powders, additives and cleaning agents, you must follow the manufacturer's instructions.
- Empty pockets.
- Remove metal parts (paper clips, etc.).
- Wash delicates in the net/bag (tights, curtains, underwired bras).
- Close zips, button up covers.
- Brush sand out of pockets and collars.
- Remove curtain fittings or include in the net/bag.

Loading the laundry

- To ensure an optimum spin performance, load large **and** small items of washing.
- Individual items may cause excessively large imbalances.
- Do not jam items of washing between the washing machine door and rubber seal.

Soaking

Load washing of the same colour.

Dose detergent with i-Dos or pour into dispenser / according to manufacturer's instructions. Select the required programme. Select **Start/Reload**. After approx. 10 minutes select **Start/Reload** to stop the programme. After the required soaking time, select **Start/Reload** again. Programme continues.

Starching

Washing should not be treated with fabric softener.

Select **Rinse/Spin** programme. Manually pour liquid starch into the / dispenser according to manufacturer's specifications (if required clean beforehand). Select **Start/Reload**.

Dyeing/Bleaching

Dye in household quantities only. Salt may attack stainless steel! Observe specifications of the dye manufacturer! Do **not** bleach washing in the washing machine!

Load display

The load sensor detects the load level in the washing machine. The washing is not balanced.

Load adjust

Independently of the load display, the load adjust. uses other sensors to optimally adjust the water and power consumption and the programme duration in each programme – depending on textile type and load.

Reload

Select **Start/Reload** button if you want to add more items of washing after the programme starts. The machine checks whether a top-up is possible. Follow the information on the display panel. At a high water level and/or temperature or while the drum is rotating, the washing machine door remains locked for reasons of safety. To continue the programme, select the **Start/Reload** button.

Childproof lock/appliance lockout ON–OFF, display symbol

The washing machine can be secured to prevent the set functions from being unintentionally changed.

Activate: Press the **Menu** button for 5 seconds. Symbol is lit.

Deactivate: Press the **Menu** button for 5 seconds.

- If the programme selector is moved after start: Symbol flashes.
- First move programme selector back to the original programme, then deactivate.
- Childproof lock can remain activated until a programme is next started, even after the machine is switched off (name of the programme last run is indicated on the display panel). Then deactivate the childproof lock before the programme starts and, if required, re-activate after the programme starts.

Programmes with prewash, display symbol

Prewash can be selected in certain programmes. For **intelligent dosage i-Dos**: Selected detergent is used for prewash and main wash. To avoid an unnecessary overdosage of detergent for prewash/main wash, we recommend the setting normal for the dosage.

Manual dosage: Divide detergent for prewash and main wash. Put detergent for prewash in the drum and pour detergent for main wash in dispenser / . Do not use any detergents containing bleach for coloured textiles.

Information on programmes/Options

Automatic programmes

The degree of soiling and the type of washing are automatically detected and the washing sequence as well as intelligent dosage are optimally adjusted.

- Automatic: for durable textiles
- Automatic soft: gentler treatment of washing

Outdoor + Impregnation

The laundry must not be treated with fabric softener.

Special detergents and textile-guard agents suitable for machine wash available in particular from sports shops. Dosage according to manufacturer's instructions.

1. Set programme selector to **Outdoor**. Load the drum.
2. Dose special detergent for outdoor textiles in dispenser / .
3. Select **Start/Reload**. Programme stops before textile-guard step.
4. Dose textile-guard agent in dispenser / .
5. Select **Start/Reload**. After-treatment of the washing according to manufacturer's instructions.

Rinse/Spin

For this combined **Rinse/Spin** programme a rinse cycle is preset under the **Extra rinse** programme option. → Page 6 If only a spin cycle is required, set **Extra rinse** to **OFF**.

Stain selection

Do not let stains dry. Remove solid substances beforehand. Arrange items of washing as usual and load washing machine. Select a stain type (cannot be combined).

A total of 16 different stains can be selected. The washing machine adjusts the washing temperature, drum movement and soaking time specific to the type of stain. Hot or cold water, gentle or intensive washing control and long or short soaking provide the wash programme with a special sequence for each type of stain.

Select stain selection by pressing the **Menu** button; select stain by pressing the **+/- Select** buttons.

The result: stains are treated optimally.

Stains

baby food	cosmetics	grease + oil	strawberry
blood	dirty socks	orange	sweat
chocolate	egg	red wine	tea
coffee	grass	soil + sand	tomatoes

2 stain programmes explained in detail (examples)

egg Soaking in a lukewarm water bath, selected wash cycle with higher water level and additional rinse cycles to remove particles.

blood Blood is first "dissolved" in cold water, then the selected wash programme starts.

For the other stains we have developed comparable solutions in intensive studies.

Intelligent Dosage System (i-Dos)

Switching on the appliance

The appliance has been preset at the factory for the dosing of a liquid detergent and a softener, indicated by corresponding changeable inserts in the fill covers:

- Color detergent, pre-installed,
- Softener only i-Dos 2, pre-installed,
- Standard/universal detergent, enclosed.

Instead of softener, a second liquid detergent can also be used in dispenser i-Dos 2. → Page 13

The changeable inserts can be changed as required.

Filling dispenser

1. Open detergent drawer.
2. Open fill cover.
3. Add detergent/fabric softener. Do not fill above the **max** mark.
4. Close fill cover.
5. Slowly push in detergent drawer.

Once the appliance is switched on, the completely inserted drawer is indicated by:

- A small display on the handle is lit when intelligent dosage i-Dos1/i-Dos2 is selected. → Page 11
- Display flashes once if intelligent dosage is not selected. → Page 11

When selecting your detergent and care product, follow the manufacturers instructions. We recommend the use of standard, universal and color liquid detergents for all machine-washable, coloured textiles made of cotton and synthetic materials.

- Use liquid products only.
- Do not use any solvent-based, corrosive or gas-emitting products (e.g. liquid bleach).
- Do not mix detergent and softener.
- Do not use any superimposed or highly thickened products.
- To prevent product from drying, do not leave the fill cover open for a long time.

In daily use

Illuminated displays in the drawer handle

- Display **is lit** if intelligent dosage is selected for the dispenser.
- Display **flashes** if level below minimum.
- Display **flashes briefly** when drawer has been inserted correctly (if intelligent dosage not selected). → separate Installation/Maintenance instructions, Page 9

Intelligent Dosage System (i-Dos)

Selecting and deselecting intelligent dosage/adjusting dosage strength

The intelligent dosage of detergent and softener is selected in the factory for all permitted programmes, → Page 7 (dosage strength normal) and can be changed individually for each programme.
In addition to intelligent dosage, washing additives (e.g. stain remover) can be added manually via dispenser .

Changing dosage strength:

1. Select dosage menu by pressing **i-Dos 1/i-Dos 2** buttons.
2. Select required dosage strength by pressing; **+/- Select** buttons. Indicator lamp in the drawer handle goes out when the setting is **OFF**.

finished in 2:26
i-Dos1: deterg.
dosage: normal

The selection (ON/OFF) of i-Dos 1 and i-Dos 2 is retained for each programme until the next change occurs, even if the machine is switched off.

Reloading detergent/softener

The flashing of the associated illuminated display when intelligent dosage is selected and a corresponding message on the display panel indicate that the level is below the minimum. There are still enough contents for approx. 3 washes.

The same detergent or softener can be topped up at any time. If the product/manufacture is changed, we recommend cleaning the dispensers beforehand → *separate Installation/Maintenance instructions, Page 8, 9*, and, if required, adjusting the basic dosage.

Standard settings i-Dos

If required, change basic dosages for detergent and softener.

The basic dosage is the dosage of detergents and softeners for an average domestic load. The basic dosage to be set corresponds to the recommendation of the detergent or softener manufacturer (normal soiling, average softness, average domestic load for the existing water hardness).

This information can be found on the package label of the detergent/softener or ask the manufacturer directly.

To determine the existing water hardness, use a test strip or check with your water supply company.

My water hardness:

Factory setting of the basic dosage: detergent 75 ml/softener 36 ml

To adjust the basic dosages:

1. Press **√ Menu** button to select menu option **i-Dos1: basis** or **i-Dos2: basis**.
2. Press **+/- Select** buttons to set the basic dosage (10 ml – 200 ml).

finished in 2:26
i-Dos1 basis
deterg.: 75ml

hold down button = quick run through

Intelligent Dosage System (i-Dos)

Converting i-DOS 2 dispenser contents

Instead of softener, a second liquid detergent can also be used in dispenser i-DOS 2.

1. Press **√ Menu** button to select **i-Dos2: content**.
2. Press **+/- Select** buttons to switch between softener and detergent.

finished in 2:26
i-Dos2: content
softener

– An additional changeable insert for a second detergent is enclosed and can be fitted in the fill cover. → Page 11
– When the dispenser contents are changed, the basic dosage is reset to the corresponding factory setting. If required, adjust the basic dosage.

Manual dosage in dispenser

1. Set intelligent dosage to – (OFF). → Page 12
2. Dose in dispenser / according to amount of washing, manufacturer's specifications and existing water hardness.
/ = Powder/liquid detergent

– Do not manually dose liquid detergent for programmes with **Pre-wash**  and/or with **End time** programme option.
– For programmes with **Pre-wash**  pour in detergent. → Page 9
Do not open detergent drawer while water is being supplied.

Customer service

If you cannot rectify the fault yourself (→ *separate Installation/Maintenance instructions, What to do if ...*), please contact our customer service. We will always find a suitable solution to avoid unnecessary visits by technicians.

You can find the contact data for your nearest customer service here or in the customer service list (depending on model).

- GB 0844 8928999
- IE 01450 2655

Please give customer service the product number (E-Nr.) and the production number (FD) of the appliance.

E-Nr. _____ FD _____

Product number Production number

*These instructions can be found on:
inside of washing machine door */open
service flap * and rear of the appliance.
* depending on model*

Rely on the competence of the manufacturer. Contact us.
You can therefore be sure that the repair is carried out by trained service technicians who carry original spare parts.

Follow the safety instructions on Page 8!
