Cleaning your Oven

Easy Clean

The Easy Clean function can only be started once the oven cavity is cold (room temperature) and the appliance door is closed. Do not open the appliance door during this operation. Doing this will interrupt the Easy Clean function.

- **1.** Remove the accessories and racks from the oven cavity.
- 2. Touch the ON I OFF touch button.
- 3. Touch the MENU touch button.
- **4.** Swipe to the left or right to select "Easy Clean $\boxed{\underline{\delta}}$ ".
- 5. Touch the bottom line.
- 6. Touch the START I STOP touch button.

The appliance starts the Easy Clean function. The remaining time appears on the display.

Ecolytic Clean

- 1. Touch the ON I OFF touch button.
- 2. Touch the MENU button.
- **3.** Swipe to the left or right to select "Ecolytic Clean™".
- **4.** Touch the bottom line.

 The cleaning time with Ecolytic Clean is displayed.
- 5. Touch the bottom line.
- **6.** Touch the START I STOP touch button.

The appliance starts Ecolytic Clean. The remaining time appears on the display. Keep the kitchen ventilated while the cleaning function is running.

As soon as the cleaning function has run through, a signal sounds and the appliance ends the operation automatically.

Descale:

The appliance must be descaled regularly in order for it to continue operating correctly. When only five more steam assisted operations are possible, or fewer, the appliance reminds you to descale it with a message on the display. The number of remaining operations is displayed after the appliance is switched on. You can therefore prepare for the descaling in good time.

Mode Description and Usage

Heating mode		Temperature °F (°C)	Use	Tips
٨	True Convection*	150-475° (65-250°)	For baking and cooking small food items on one or more racks. The fan distributes the heat from the ring heating element in the back panel evenly around the oven cavity.	Reduce Temperature 25°F from recipe. Use for 2 and 3 racks.
<u>&</u>	Convection Bake*	150-475° (65-250°)	Use for large baked items and breads on 1 or 2 racks. Also suitable for side dishes and casseroles. Heat is emitted from above and below while the fan distributes the heat evenly around the oven cavity.	Reduce Temperature 25°F from recipe. Use for 1 and 2 racks.
-	Bake*	150-475° (65-250°)	For traditional baking and roasting on one level. Especially suitable for cakes on multiple racks. Heat is emitted evenly from the top and bottom.	Best for cakes on 2 racks.
	Convection Roast*	150-475° (65-250°)	Roasting of poultry, larger pieces of meat and vegetables. Heat is emitted from above and below while the fan distributes heat evenly around the oven cavity.	Preheat not necessary. Use recipe/cooking chart temperature. Use open roasting pan with rack.
_	Roast*	150-475° (65-250°)	For roasting poultry or meats. The heat is emitted from above and below.	Preheat not necessary, Use for cooking bags and covered bakeware.
Ž.	Convection Broil	450-500° (230-260°)	For roasting poultry, whole fish and larger pieces of meat. The broil element and the fan switch on and off intermittently. The fan circulates the hot air around the food	Preheat 3 - 4 minutes. Use with 1" or thicker meats.
****	Broil	450-500° (230-260°)	For broiling flat items, such as steaks or hamburgers, for making toast, and for cooking au gratin. The whole area under the broil heating element becomes hot.	Preheat oven 3-4 minutes. Use with rack in pan to drain fat away. Turn meat once.
€ €€	Steam**	85-212° (30-45°)	For vegetables, fish, side dishes, juicing fruit and blanching.	Cooking time depends on size of food, freshness. Use accessories that came with oven. Best with one layer of food in pan.

^{*}Steam assistance possible with this type of heating in upper oven only (water reservoir MUST be full before appliance is operated).

Troubleshooting

Oven Problem	Possible Causes and Suggested Solutions	
Oven door is locked and will not open, even after cooling.	Turn the oven off at the circuit breaker and wait five minutes. Turn breaker back on. The oven should reset itself and will be operable.	
Oven is not heating.	Check circuit breaker or fuse box to your house. Make sure there is proper electrical power to the oven. Be sure oven temperature has been selected.	
Operations with steam or descaling do not start or do not continue.	The water tank is empty or operations are locked due to the descaling process. Fill the water tank and continue the descaling or steam cooking process.	
The appliance prompts you to rinse.	The power supply has been disconnected or the appliance has been switched off during the descaling process. Once the appliance is switched on again, rinse it twice.	
"E" and a number appears in display and control beeps.	This is a fault code. Follow the instructions in the display. If the code remains or there are no instructions in the display, press INFO to display more information (if applicable) and to turn off the beep. If the code is still displayed, write down the fault code number, turn off the oven, and call Customer Service.	
Fan is running during modes that do not use convection.	On some models, the convection fan runs while the oven is preheating for the Bake mode. This is normal.	
The "Fill water tank" message appears even though the water tank is full.	Check that the water tank is fully pushed in to place. The tank could also possibly be damaged from being dropped. Due to impact, components inside the water tank have come loose and the tank is leaking. If the message still appears and nei-ther of these problems are the issue, it may need a new sensor. Call Customer Service.	
When cooking with steam, a lot of steam is produced.	The appliance is being automatically calibrated and is a normal occurance.	
There is a "pop" noise during cooking.	Cold/warm effect with food, caused by the steam.
