Planning notes
The horizontal positioning of the knobs may be
aligned with the specific cooking areas.
The drawing "Installation of the control knob"
must be observed if the panel is more than 23
mm thick (there must be a recess at the rear).
The bearing capacity and stability, in the case of
thin worktops in particular, must be supported
using suitable substructures. Take into account
the appliance weight and additional loads.
Installation is possible in worktops made of
stone, synthetics or solid wood. Heat resistance
and watertight sealing of the cut edges must be
observed. Concerning other materials please
consult the worktop manufacturer.
The groove must be continuous and even, so
that uniform placing of the appliance on the
gasket is ensured. Do not use discontinuous
lining.
The joint width may vary due to size tolerances
of the combinations and of the worktop cut-out.
If installing several appliances in individual
cut-outs allow for a division bar of minimum 50
mm between the individual cut-outs.
Operates with magnetic (induction) iron pots
and pans only. For an optimal heat distribution,
the use of sandwich bottom cookware is
recommended.
